

Information Gathering Task

Infrastructure Footprinting with Maltego:

Target Website: cyberpedia.site.

Objective: To perform OSINT gathering and map the technical infrastructure of the target domain.

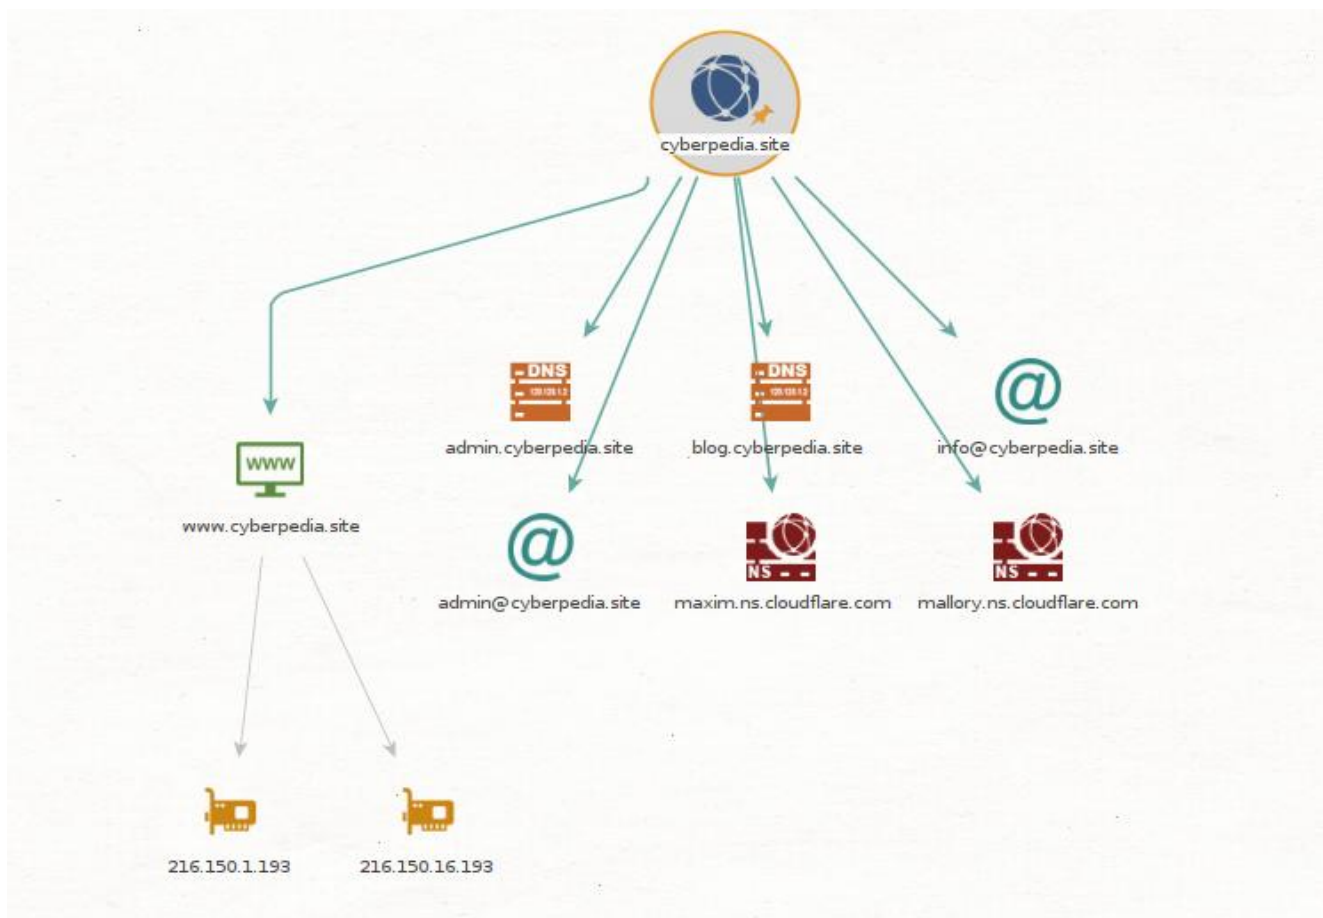

Analysis Results:

IP Addresses: The IPs 216.150.1.193 and 216.150.16.193 are NOT actual server IPs. They are shared **Vercel** Anycast gateways for **Serverless** hosting, not the target's unique identity. **Subdomains:** Identified active subdomains such as admin.cyberpedia.site

blog.cyberpedia.site.

DNS Infrastructure: The target utilizes Cloudflare name servers maxim.ns.cloudflare.com mallory.ns.cloudflare.com

Email Contacts: Discovered administrative email contacts: admin@cyberpedia.site
info@cyberpedia.site.

Identifying the Responsible Email for itsecgames.com:

A comprehensive investigation using the **whois** tool (filtered via `grep "Email"`) confirmed that all direct owner contact information is **redacted** by **GoDaddy's privacy service**. The publicly listed contact is a generic abuse email: `abuse@godaddy.com`.

Technical Result: To identify the entity responsible for the domain's infrastructure, the SOA record was queried using the **dig** tool, revealing the technical DNS administrator email as `dns@jomax.net`.

Conclusion: These findings, supported by **theHarvester** scan (which returned no public emails), prove that the owner's personal details are **fully masked**. Therefore, the email retrieved from the SOA record stands as the only available technical reference for the domain's administration.
